Internship Opportunities with the Coastal Systems Program

The Coastal Systems Program has opportunities for interns to participate as part of the research effort in summer and throughout the academic year (contingent on funding availability). Research areas include water quality monitoring, nutrient cycling, coastal ecosystems, wetlands ecology, and ocean renewable energy.

Interns participate in a wide range of field and laboratory work, including but not limited to nearshore and offshore sampling, citizen-based environmental monitoring, maintenance of long-term experiments in wetlands, sample preparation, and a wide variety of laboratory analytical procedures.

Successful candidates should be capable of working both independently and as part of a team.

To apply for an internship, please send a cover letter, unofficial transcript and resume, including the names of at least three references, to:

Dr. David Schlezinger
SMAST 706 South Rodney French Blvd. New Bedford, MA 02744
508-910-6314

Cover letters and resumes can also be attached as Word files and emailed to: dschlezinger@umassd.edu.

Additional Information can be found at:
