Configuring Windows XP on the Wireless Network

1. From the Windows Start menu, select Connect To | Show all connections.

2. Right click the Wireless Network Connection, and select Properties from the pop-up menu.

3. On the Properties dialog, select the Wireless Networks tab, and click Add.

4. Select the Association tab, and enter the following settings:
   - In the Network name [SSID] field, type lehman_college
   - From the Network Authentication drop-down, select WPA2
   - From the Data encryption drop-down, select AES

5. Next, select the Authentication tab, and enter the following settings:
   - From the EAP type drop-down, select Protected EAP (PEAP)
   - Uncheck the Authenticate as computer... option
   - Uncheck the Authenticate as guest... option
6. Click **Properties**.

7. On the **Protected EAP Properties** dialog, uncheck the **Validate server certificate** option, as shown in the illustration:

8. Click **Configure**.

9. Uncheck the **Automatically use my Windows login name and password** box and click **OK**.

10. Click **OK** on each of the three previous windows to save the settings.

11. Click the Wireless Network Connection Bubble in order to login.

12. To login:
   - Enter your **Lehman ID Username** and **Password**
   - Leave the **Logon domain** field blank and click **OK**

13. The Wireless Network Connection bubble shows you are connected.

14. Your machine is now configured to connect to **lehman_college**. Close the **Network Connections** window by clicking on the red X in the upper right-hand corner of the window.

15. To logout, click on the computer icon located in the taskbar.

16. In the Wireless Network Status window, click on **View Wireless Networks**.

17. Select **lehman_college** from the list and click the **Disconnect** button.

In the future, you may connect to **lehman_college** by simply selecting it from the list of available wireless networks and providing your login credentials.
